Ryan D. Burke [ryanburketv@gmail.com | https://rburke.dev/]

PROFESSIONAL SUMMARY

Senior Software Engineer with six years of experience architecting scalable distributed systems and cloud-native applications. Proven track record of leading architectural initiatives, improving system reliability, and mentoring engineers, with expertise in C#/.NET, SQL, TypeScript, and microservices architecture.

PROFESSIONAL EXPERIENCE

DealerOn | February 2021 – Present

Senior Software Engineer | October 2025 – Present

- Own a next-gen greenfield, drag-and-drop page editor and rendering platform enabling automotive dealerships to build, customize, and publish websites; contributing across frontend, backend, and cross-service integrations.
- Mentoring other engineers on technical matters and decisions.
- Frequently scoping technical work; translating business language into technical plans for other engineers to work on.
- Member of an internal architectural software group consisting of the company's top engineers. In the group we discuss high-level cross-domain architectural decisions, such as: security, software testing protocols, new technology we may want to adopt, etc.
- Build cross-domain software solutions such as: designing APIs, data contracts, internal libraries, and testing suites.
- Improve frontend performance and reliability through non-blocking CSS, client-side caching, and proactive observability using Grafana dashboards and automated alerts.

Software Engineer | February 2021 – October 2025

- Co-led the decomposition of the company's largest legacy monolith codebase into six independently owned services. Had to define service boundaries, data migration strategies, and CI/CD workflows while coordinating implementations across engineering teams.
- Led the migration of a mission-critical Leads platform from a monolithic architecture to three independently deployable microservices, leveraging incremental migration strategies, isolated databases, and durable RabbitMQ messaging.
- Served as a technical subject matter expert, driving architectural decisions, design reviews, technical roadmapping, and code reviews while mentoring fellow engineers.
- Improved platform uptime to 99.7% and reduced severity incidents by 30% through service isolation, fault-tolerant messaging, retry policies, and graceful degradation.

TECHNICAL SKILLS

Languages: C#, SQL, TypeScript

Frameworks: .NET, .NET Aspire, Vue.js

Cloud & Infrastructure: Microsoft Azure, Docker, Redis

Messaging: RabbitMQ, MassTransit

Architecture & Practices: Microservices, Distributed Systems, REST APIs, Database Design, CI/CD, Resilience Patterns

EDUCATION

University of Maryland, College Park | B.S. Computer Science | December 2020
