Ryan D. Burke

ryanburketv@gmail.com | https://rburke.dev/

PROFESSIONAL SUMMARY

Senior Software Engineer with nearly six years of experience architecting scalable distributed systems and cloud-native applications. Proven track record of leading architectural initiatives, improving system reliability, and mentoring engineers, with expertise in C#/.NET, SQL, TypeScript, and microservices architecture.

PROFESSIONAL EXPERIENCE

DealerOn | February 2021 – Present

Senior Software Engineer | October 2025 – Present

- Develop a greenfield, drag-and-drop page editor and rendering platform enabling automotive dealerships to build, customize, and publish websites, contributing across frontend, backend, and cross-service integrations.
- Design versioned API and data contracts for an extensible widget architecture, enabling other engineering teams to integrate independently developed components through shared NuGet packages while maintaining backward compatibility.
- Improve frontend performance and reliability through non-blocking CSS, client-side caching, and proactive observability using Grafana dashboards and automated alerts.

Software Engineer | February 2021 – October 2025

- Co-led the decomposition of the company's largest monolith into six independently owned services, defining service boundaries, data migration strategies, and CI/CD workflows while coordinating implementations across engineering teams.
- Led the migration of a mission-critical Leads platform from a monolithic architecture to three independently deployable microservices, leveraging incremental migration strategies, isolated databases, and durable RabbitMQ messaging.
- Improved platform uptime to 99.7% and reduced severity incidents by 30% through service isolation, fault-tolerant messaging, retry policies, and graceful degradation.
- Served as a technical subject matter expert, driving architectural decisions, design reviews, technical roadmapping, and code reviews while mentoring fellow engineers.

TECHNICAL SKILLS

Languages: C#, SQL, TypeScript

Frameworks: .NET, .NET Aspire, Vue.js

Cloud & Infrastructure: Microsoft Azure, Docker, Redis, FusionCache

Messaging: RabbitMQ, MassTransit

Architecture & Practices: Microservices, Distributed Systems, REST APIs, SQL Server, Database Design, CI/CD, Resilience Patterns

EDUCATION

University of Maryland, College Park | B.S. Computer Science | December 2020
